**ELECTROCHEMICAL CELL AND PRODUCTION METHOD THEREFOR**

Examiner: Yuan

S.N. 10/803,777

Art Unit: 1745

April 18, 2007

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, drawn to an electrochemical cell, classified in class 429, subclass 121.
  - II. Claims 19-21, drawn to a method for producing an electrochemical cell, classified in class 429, subclass 163.

The inventions are distinct, each from the other because of the following reason:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). As admitted in the subject matter of the present claims, the electrochemical cell can be fabricated by three distinct processing procedures as recited in claim 19, 20 and 21, respectively.
3. If invention I is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention.
  - I-1, Claims 1-9, drawn to an electrochemical cell, wherein a sealing material is melt-bounded in an entire periphery of a predetermined portion of an outer lead terminal.

Art Unit: 1745

I-2, Claims 10-18, drawn to an electrochemical cell, wherein a sealing material is melt-bounded to an outer lead terminal and the around a side face of the outer lead terminal.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims directed to invention I is generic

4. If invention II is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention.

II-1, Claim 19, drawn to a method for producing an electrochemical cell comprising the steps of forming a sealing material by melt-bounded the sealing material in an entire periphery of a predetermined portion of an outer lead terminal.

II-2, Claim 20, drawn to a method for producing an electrochemical cell comprising the steps of forming a sealing material by melt-bounded the sealing material to an outer lead terminal and around a side surface of the outer lead terminal.

II-3, Claim 21, drawn to a method for producing an electrochemical cell comprising the steps of melt-bonding a sealing material to each of front and rear faces of a predetermined portion of an outer lead terminal.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims directed to invention II is generic.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
